

Production Launch — Cost Breakdown

JuiceVibes — Infrastructure & Deployment Plan

1. Website Development (Already Agreed)

Item	Amount (LKR)
Website Development (already completed)	30,000
Status	Paid / Agreed

2. Deployment & Infrastructure Setup (New — One-Time Cost)

This covers the work required to take the completed system live on production infrastructure — separate from the development work already delivered.

Deployment & Infrastructure Setup (One-Time)	Amount (LKR)
Production deployment (Website + Admin Dashboard + Backend API)	—
Domain connection & DNS configuration	—
Database setup (Neon PostgreSQL)	—
SSL & security configuration (Cloudflare)	—
Image storage integration (Cloudinary)	—
Final production testing & go-live	—
Deployment & Infrastructure Setup — Total (One-Time)	10,000

3. Ongoing Infrastructure (Purchased & Billed Directly to Client)

These accounts should be created and billed in the client's own name, so ownership of the domain, hosting, and billing stays fully with the client.

Service	Purpose	Billed To
juicevibes.lk (register.lk)	Domain name	Client
Vercel	Website + Admin Dashboard hosting	Client
Railway	Backend API hosting	Client

4. Recommended Infrastructure Stack

- Domain — juicevibes.lk (register.lk)
- Website — Vercel
- Admin Dashboard — Vercel

- Backend API — Railway
- Database — Neon PostgreSQL
- Image Storage — Cloudinary
- DNS / SSL / Security — Cloudflare

5. Why This Approach

- Modern stack (Next.js, NestJS, PostgreSQL) is not compatible with standard shared PHP hosting.
- A traditional VPS / dedicated hosting setup would cost approx. LKR 45,000–100,000+ per year.
- This cloud architecture gives enterprise-level performance at a much lower cost while the business is starting out.
- It scales — Vercel Pro / Railway Pro plans can be added later without rebuilding or migrating the system.

6. Timeline

- Domain purchase → production deployment → hosting setup → DNS configuration → SSL setup → final testing
 - Estimated duration: 1–2 working days after the meeting
-

Total one-time cost for this discussion: LKR 10,000

(Domain, Vercel, and Railway plan costs are separate and billed directly to the client's own accounts.)
