

Juice Vibe Waskaduwa

SOFTWARE DEVELOPMENT INVOICE

Invoice #JV-2026-001

This invoice covers the complete digital platform development for Juice Vibe Waskaduwa, prepared by Dulanjaya Lakruwan, Full Stack Software Developer. The document outlines the full project scope, a detailed cost breakdown, a two-phase payment schedule, and the deliverables included in this engagement. All terms, warranty provisions, and support options are described in the sections that follow.

Invoice & Party Details

This section provides the essential reference information for this invoice, including the invoice number, relevant dates, and the contact details for both the developer and the client. Please review all information carefully and retain this document for your records.

Project Title

Juice Vibe Waskaduwa – Complete Digital Platform Development

A full-stack digital platform developed to modernize Juice Vibe Waskaduwa's customer experience and business operations. The solution encompasses a customer-facing website, an admin dashboard, a backend API, database infrastructure, cloud deployment, and integrated business management tools.

Project Overview

The Juice Vibe Waskaduwa Digital Platform is a comprehensive, modern web application built to transform how the business operates and engages with its customers. This project represents a complete end-to-end software development engagement — from initial UI/UX design through to cloud deployment and final handover. Every component has been developed with performance, security, and scalability in mind, ensuring the platform can grow alongside the business.

The platform is structured around six core pillars. The customer-facing website provides an attractive, mobile-responsive experience where visitors can browse the menu, view products, explore the gallery, and interact with the brand. The admin dashboard gives business owners and staff full control over menu items, categories, orders, and business settings without requiring any technical knowledge. The backend API powers all data operations securely and efficiently, while the database system stores all business and customer data with reliability. Cloud deployment ensures the platform is accessible 24/7, and the integrated business management tools streamline day-to-day operations.

Customer Website

A premium, fully responsive website built with Next.js that delivers a fast and engaging experience across all devices. Customers can browse the menu, view products, explore the photo gallery, and use the shopping cart feature — all optimized for mobile and desktop.

Backend API

A robust REST API built with NestJS handles all data operations securely and efficiently. JWT authentication protects user sessions, while Swagger documentation makes the API easy to understand and extend in the future.

Admin Dashboard

A powerful management interface that gives Juice Vibe staff full control over the business. Manage menus, categories, orders, and gallery content through an intuitive interface. User role management ensures the right people have the right access levels.

Database & Cloud

A PostgreSQL database managed through Prisma ORM ensures data integrity and scalability. Cloud deployment on Vercel with Cloudinary image storage and Neon PostgreSQL keeps the platform running reliably around the clock.

Software Development Cost Breakdown

The table below provides a detailed breakdown of every service included in this project, along with the individual cost for each component. Each line item represents a distinct area of development work — from initial design and user experience planning through to final testing, quality assurance, and project handover. The costs reflect the time, expertise, and technical resources required to deliver a professional-grade digital platform tailored to the specific needs of Juice Vibe Waskaduwa.

The development process is structured to ensure quality at every stage. UI/UX design establishes the visual foundation, front-end and back-end development bring the platform to life, and rigorous testing ensures a polished final product. Cloud deployment and documentation complete the engagement, ensuring the platform is production-ready and fully documented for future reference.

Service	Amount (LKR)
UI/UX Design & User Experience	20,000
Customer Website Development (Next.js)	35,000
Admin Dashboard Development	35,000
Backend API Development (NestJS)	30,000
Database Design & Prisma ORM	15,000
Authentication & Security Implementation	10,000
Cloud Deployment & Configuration	10,000
Cloudinary Image Management Integration	5,000
API Documentation & Technical Documentation	5,000
Testing, Quality Assurance & Bug Fixing	10,000
Project Delivery & Handover Preparation	5,000

The total value of all development services listed above amounts to LKR 180,000. A special project discount of LKR 150,000 has been applied, resulting in a final agreed development fee of LKR 30,000. This discounted rate reflects a commitment to supporting Juice Vibe Waskaduwa's digital growth while maintaining the highest standards of software development quality.

Project Value Summary

The financial summary below outlines the total value of the development work, the special discount applied to this project, and the final agreed fee. This invoice represents a significant investment in the digital infrastructure of Juice Vibe Waskaduwa, delivered at a highly competitive rate.

180K

Total Development Value

Full value of all development services before discount (LKR)

150K

Special Project Discount

Discount applied to this project (LKR)

30K

Final Agreed Fee

Total amount payable after discount (LKR)

Advance Payment

LKR 10,000

Required to confirm project approval and continue development work. This payment covers the initial phase of implementation, testing, and final preparation.

Remaining Balance

LKR 20,000

Payable after successful project completion and before final delivery. Full handover of software, credentials, and documentation occurs upon receipt of this payment.

- ☐ The advance payment of LKR 10,000 confirms client approval of the project scope, agreement to proceed with development, reservation of development time, and authorization to continue implementation, testing, and final preparation activities.

Project Workflow

The project follows a clear, four-step workflow designed to ensure transparency, mutual agreement, and timely delivery at every stage. This structured approach protects both the client and the developer by establishing clear milestones and expectations before work proceeds. Each step builds on the previous one, creating a logical progression from initial approval through to final delivery and project acceptance.

Step 1 — Project Approval

Client reviews and confirms the project scope, approves this invoice, and agrees to the delivery terms. This step establishes the formal agreement between both parties and authorizes the developer to proceed.

1

Step 2 — Advance Payment

Client transfers the advance payment of LKR 10,000. This payment confirms commitment to the project, reserves the developer's time, and triggers the continuation of all development activities.

2

Step 3 — Development Continuation

After receiving the advance payment, all remaining development work continues — including final implementation, comprehensive testing, improvements based on feedback, deployment preparation, and documentation.

3

Step 4 — Final Delivery

Upon project completion, the client transfers the remaining balance of LKR 20,000. Final handover includes software delivery, credentials, full documentation, and formal project acceptance.

4

Each phase of this workflow is designed to minimize risk and maximize clarity. The advance payment ensures that development resources are committed and that work can continue without interruption. The final payment, due upon successful completion, ensures that the client receives a fully tested and deployed platform before releasing the remaining balance. This two-phase payment structure is standard practice in software development engagements and provides protection and accountability for both parties throughout the project lifecycle.

Deliverables Included

The Juice Vibe Waskaduwa Digital Platform includes a comprehensive set of deliverables across four main areas. Each deliverable has been designed and developed to meet professional standards and to provide lasting value to the business. The sections below detail exactly what is included in each area of the platform.

Customer Platform

- Premium responsive website with modern design
- Interactive menu system with categories
- Product display with images and descriptions
- Photo gallery showcasing the brand
- Shopping cart functionality
- Full mobile optimization for all screen sizes

Admin Management System

- Dashboard with analytics and insights
- Menu and category management
- Order management interface
- Gallery content management
- Business settings configuration
- User role management and access control

Backend System

- REST API with full endpoint coverage
- JWT-based authentication and security
- Database integration via Prisma ORM
- Security configuration and hardening
- Swagger API documentation

Deployment & Infrastructure

- Production deployment on Vercel
- Database setup on Neon PostgreSQL
- Cloud storage configuration via Cloudinary
- Environment configuration and optimization

Warranty & Bug Fix Support

Every software project requires ongoing support after delivery to ensure it continues functioning as intended. This engagement includes a 30-day free warranty period following final delivery, covering any software bugs or technical issues related to the delivered features. After this period, an optional monthly maintenance plan is available for clients who want continued professional support.

✓ 30-Day Free Warranty

Included at no additional cost after final delivery. This warranty covers any issues that arise from the delivered features, ensuring the platform works as specified.

- Software bug fixes
- Technical issues related to delivered features
- Deployment assistance

✗ Not Included in Warranty

The following items fall outside the scope of the free warranty and would require a separate agreement or the monthly support plan.

- New features or functionality
- Additional modules or integrations
- Design changes or revisions
- New third-party integrations
- Content creation or updates
- Third-party subscription charges

Optional Monthly Maintenance & Support — LKR 8,000 / Month

Available after the free 30-day warranty period expires. This professional support plan ensures your platform remains secure, updated, and performing at its best. The plan includes priority technical support, bug fixes, security updates, performance monitoring, minor content updates, deployment assistance, database health checks, and ongoing system maintenance. This is recommended for businesses that want reliable, ongoing technical support without the need for in-house development resources.

Hosting, Infrastructure & Ownership

The Juice Vibe Waskaduwa platform is currently deployed on a modern, cloud-based infrastructure using industry-leading services. The table below outlines each service provider and their role in the platform's operation. All services are currently operating on available free-tier plans, which is suitable for the current stage of the business.

Service	Provider
Website Hosting	Vercel
Backend Hosting	Vercel
Database	Neon PostgreSQL
Image Storage	Cloudinary

These services currently operate using available free-tier plans, which means there are no ongoing hosting costs at this time. As the business grows and traffic increases, some of these services may require upgrades to paid plans to ensure continued performance and reliability. Any future infrastructure upgrade costs will be discussed with and approved by the client separately before any changes are made. This ensures full transparency and gives the client complete control over any additional expenditures.

Ownership & Delivery Policy

Full ownership of the platform — including all source code, credentials, and project documentation — transfers to Juice Vibe Waskaduwa upon receipt of the final payment. Until the full agreed fee has been settled, the developer retains ownership of all project assets. This is standard practice in software development and ensures that both parties fulfill their obligations before the final handover.

Any additional requirements or features requested outside the approved project scope will be quoted separately. This allows the client to expand the platform in the future while maintaining clear boundaries around the original agreement.

Payment Method

Please use the following bank details to transfer payments. Contact the developer directly to confirm account information before making any transfer.

Bank Name: BOC - Mathugama
Account Name: A.K.D. Lakruwan
Account Number: 6424499
Branch: Mathugama

For payment confirmation, please contact via WhatsApp at +94 71 408 9493 or email at devlakruwan@gmail.com.

Payment Agreement & Client Approval

By signing this invoice, the client confirms acceptance of the project scope, agreement to the payment schedule, and understanding of all terms outlined in this document. This approval authorizes the developer to continue development work upon receipt of the advance payment and establishes the formal working relationship between both parties.

1

Acceptance of Project Scope

Client confirms that the project scope described in this invoice accurately reflects the agreed-upon deliverables and development work.

2

Agreement to Payment Schedule

Client agrees to the two-phase payment structure: LKR 10,000 advance and LKR 20,000 upon final delivery.

3

Authorization to Continue Development

Client authorizes the developer to proceed with all remaining development activities upon receipt of the advance payment.

4

Understanding of Warranty & Support Terms

Client acknowledges and understands the 30-day warranty terms and the optional monthly maintenance plan available thereafter.
